

## Limited Warranty

Your watch is warranted for a period of one year from the date of purchase.

The warranty covers manufacturing defects only. To be eligible for warranty the watch must be repaired by a Pheidippides Watches certified specialist.

The dated and signed warranty card should also be presented. Warranty issues are handled at the discretion of Pheidippides Watches.

The warranty does not cover:

- Defects due to normal wear and tear of the watch, such as but not limited to scratches, stains or dislocation of parts.
- Damages due to accidents, negligence or abusive use of the watch such as but not limited to violent shock, brutal handling, crushing or use of excessive force on any part.
- Glasses, strap and buckle.

The warranty becomes void immediately when the watch is opened by someone other than a certified specialist.

## Specifications

Self-winding mechanical movement

28.800 vph

26 jewels

Hours

44 hours power reserve

Incabloc shock absorber

0/+15 sec/day average rate

## Welcome

Congratulations with your Pheidippides Watches timepiece:  
The Hourglass.

The Hourglass is designed to catch your eye and attract the admiration of the people around you.

The Hourglass is built on pure craftsmanship that you will feel when operating and wearing the watch.

The Hourglass will pleasantly tell you time for years to come while not ruling you to the second.

We at Pheidippides Watches hope you will enjoy wearing The Hourglass as much as it has given us joy to create it.

Thank you very much for trusting us and our products. We have done everything we can to create a high quality product that lasts a lifetime.

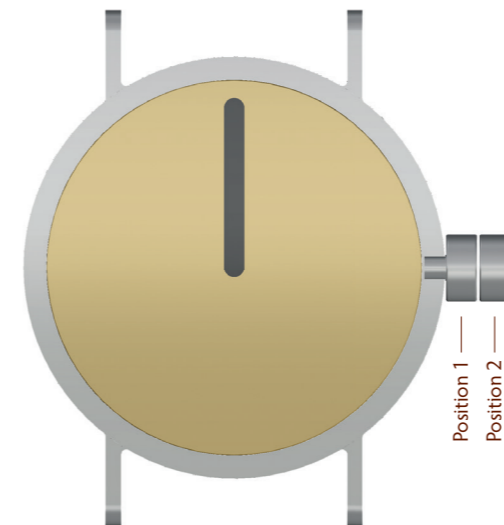

## Operation

The Hourglass is easy to operate. The crown normally resides in position 1.  
Pull out the crown to set it to position 2.

Position 1: run and manual winding (self-winding)  
Position 2: time setting (preferably clockwise)

When ready, always push the crown back into position 1.  
In position 1 the watch is sealed to 7 bar.

Always check the crown is securely pushed into position 1 before emerging the watch into water. Rinse the watch with fresh water after it has been submerged into salty water.

## Care

Keep your watch in great condition by cleaning it regularly with a microfiber cloth. Do not use detergents. This might damage the seals or stain the polished steel surfaces.

A mechanical watch should be kept running. This will avoid the lubricants to congeal. Wind your watch at least twice a month. When unwound, 20 turns of the crown will inject sufficient energy into your watch to start daily use.

Your watch has a water resistance of 7 bar. That means you can take it for a swim or other water related activities. Do not wear it while taking a shower.

Avoid temperature shocks like taking your watch into a sauna or jump into a cold sea.

Avoid excessive or repeated shocks and jolts to the watch. Do not wear while playing golf, tennis or other (high) impact sports.

Avoid exposure to magnetic fields caused by phones, loudspeakers, etc.

To keep your valuable timepiece in top condition have it checked by a certified specialist every 5 years. Check the water resistance every year.
